2.0 INTRODUCTION

When developers are sitting in all different parts of the world working on a project collaboratively, they all need a method whereby they can share their “bit” of work with **others**. In the picture below, two developers are working from different locations so that need a way to control their documents. GIT provides version control. We will learn how to create a local storage (called local repo) and then push it to a central location that is remotely located called “github”.

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

3.0 WHAT IS GIT?

Git is a **version control system** (VCS). It helps you:

- **Track changes** in your source code and/or documentation.
- **Collaborate** with others without overwriting each other's work.
- **Go back in time** to previous versions if needed.

Practical application

- Save your project at different stages (commits).
- Revert to an earlier stage if something breaks.
- Work on multiple features in parallel using **branches**.

4.0 WHAT IS GITHUB?

GitHub is a **cloud-based hosting service for Git repositories**. It allows you to:

- **Store your code / documentation online**
- **Collaborate** with others (open source or private teams)
- **Use tools** like pull requests, issues, CI/CD, etc.

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

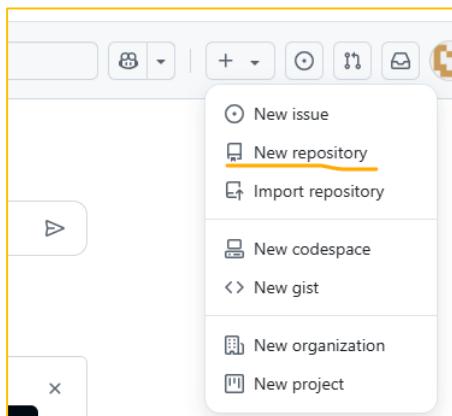

4.1 Opening a GitHub account Online

STEP 1: Click on <https://github.com/> and follow the following video

<https://www.youtube.com/watch?v=Gn3w1UvTx0A>

4.2 Creating our first REMOTE Storage (Repository) on GitHub

- Log in to GitHub.
- Left Click on the “+” sign (usually in the top-right corner or on your dashboard).
- Click **New repository**.

- Give it a **name** Projects
- Choose **Public** or **Private**.
- **Do NOT** check “Initialize with a README” if your local repo already has files — otherwise you might have merge conflicts.
- Click **Create repository**.

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB	INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY

Create a new repository [Preview](#) [Switch back to classic experience](#)

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#). Required fields are marked with an asterisk (*).

1 General

Owner * nitacademy / Projects Projects is available.

Repository name * Projects

Description Working Files 13 / 350 characters

2 Configuration

Choose visibility * Public

Add README Off

Add .gitignore No .gitignore

Add license No license

Create repository

Projects Public

Set up GitHub Copilot Use GitHub's AI pair programmer to autocomplete suggestions as you code. Get started with GitHub Copilot

Add collaborators to this repository Search for people using their GitHub username or email address. Invite collaborators

Quick setup — if you've done this kind of thing before Set up in Desktop or HTTPS SSH https://github.com/nitacademy/Projects.git Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# Projects" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/nitacademy/Projects.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/nitacademy/Projects.git
git branch -M main
git push -u origin main
```

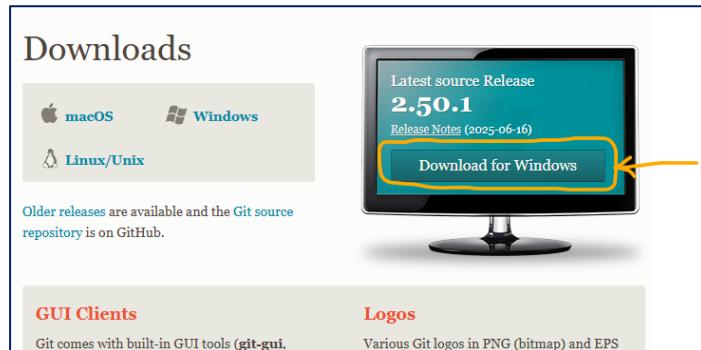

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

5.0 WHAT IS GIT BASH?

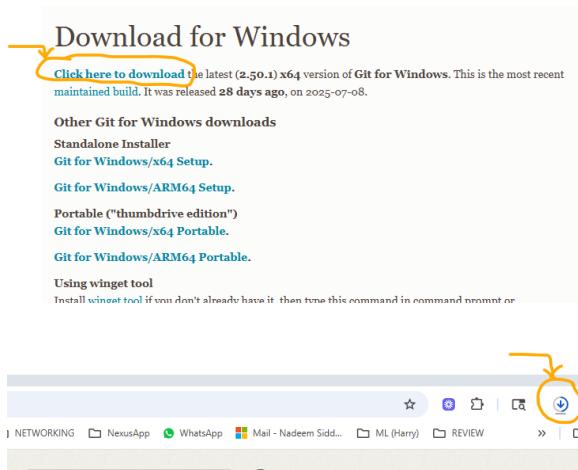

Git Bash is a **command-line application for Windows** that lets you use Git commands and Unix/Linux-like commands in Windows. Follow the following steps to Install “git-bash” on your Windows or macOS

STEP 1: <https://git-scm.com/downloads>

STEP 2: Click on “Download for Windows” or “macOS” for mac users

STEP 3:

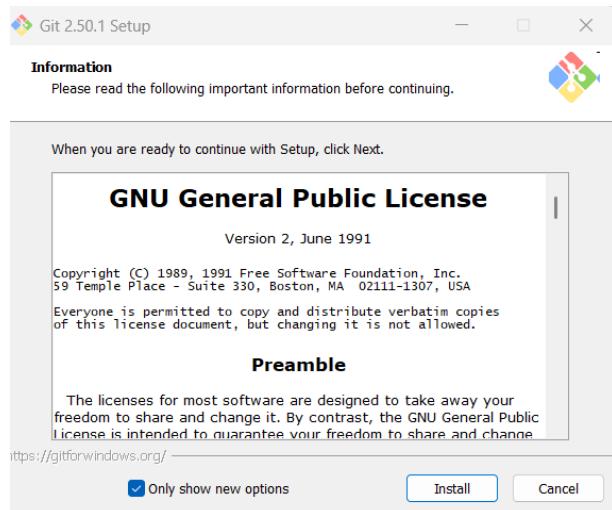

STEP 4: Check for the downloaded file

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

Windows will show a pop-up window: “Do you want to allow this app to make changes to your device” click “yes”

Then the following window will appear. Click “Install” and just continue clicking on “next” until installation starts. Download **takes time** so don’t panic!

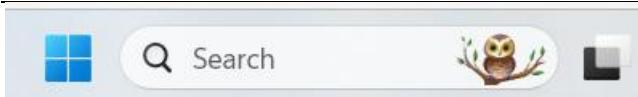

STEP 5: Click on “Launch Git Bash” and then Finish. What is Git Bash? This is a terminal similar to Windows “Command Prompt” and “Terminal”

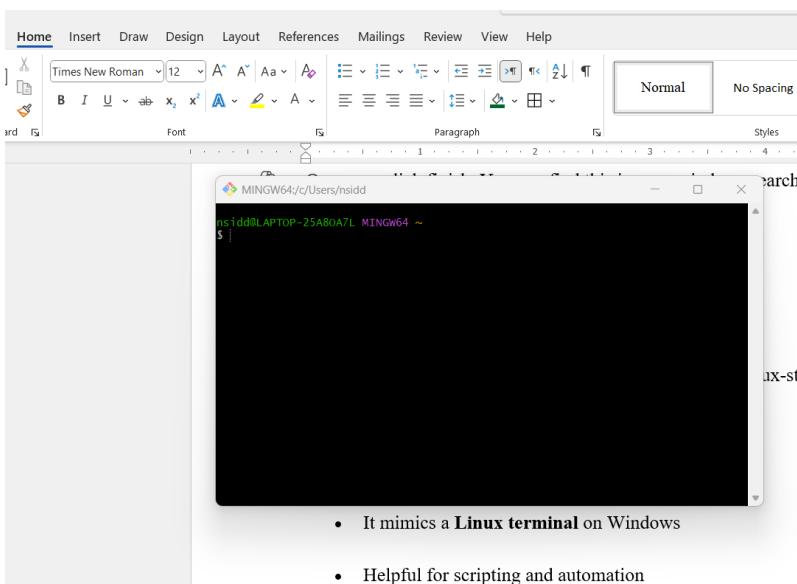

STEP 6: Once you click finish. You can find this in your windows Search by typing git bash

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

The pop-up will look similar to the window below:

- It mimics a **Linux terminal** on Windows
- Helpful for scripting and automation

- Test by running “ls” command

5.1 Why use Git Bash?

- You get **full Git command-line features**
- It mimics a **Linux terminal** on Windows
- Helpful for scripting and automation
- More **control and flexibility** than using GUI apps

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

6.0 SUMMARY OF WHAT TO INSTALL ON WINDOWS

Component	Purpose
Git Bash	Terminal to run Git + Linux commands
GitHub	Online platform to store/share Git repos

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

7.0 LAB PRACTICE

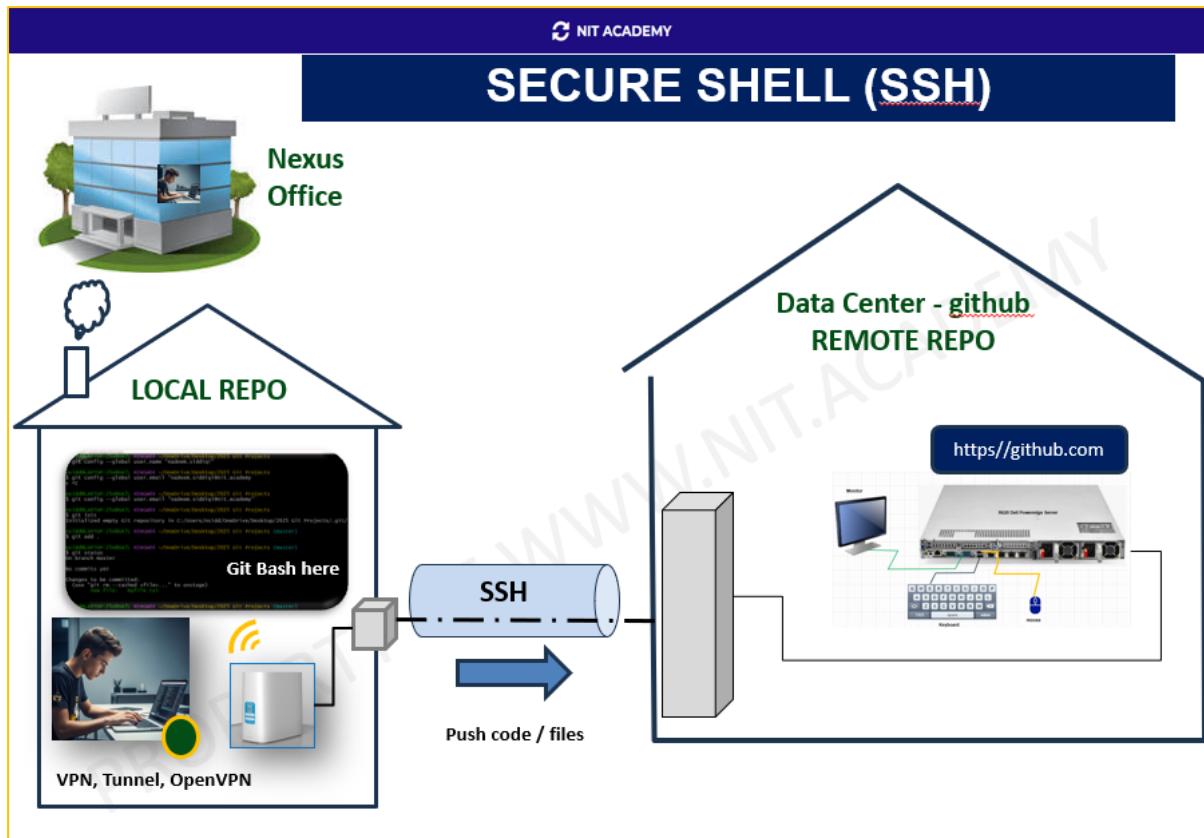

Figure 1:git in action: pushing code/files from local to remote repository

7.1 Lab Objective

Based on Figure 1 our goal is to:

1. Create a local repository
2. Use git as the version control tool to manage local and global repositories
3. PUSH code/files from our local/laptop like developers do onto the remote repository called gihub.

By the end of this lab, you will:

- Initialize a local repo on your Windows, **a Git repository**

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

-
- Track changes
 - Stage the local files
 - Commit
 - Push your document(s) to GitHub

7.2 Creating a Repository Folder on your Windows / mac Machines:

Step 1: Create a folder on your local machine (Windows/mac)

Right-click anywhere on your desktop and create a new folder and name it “**2025 Git Projects**”

Step 2: Create a “Text Document” in the 2025 Git Projects Folder

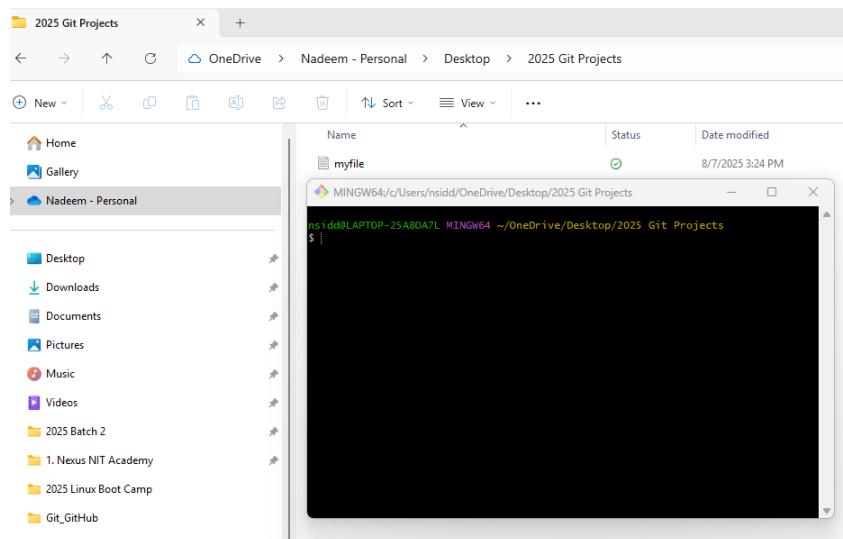

- Open “**2025 Git Projects**” folder
- Right click and select “New” and then click on “Text Document”
- Name/Rename this document “myfile”
- Write “Testing GitHub”, save and close the document

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB	INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1

7.3 Working with Git Bash

Step 1: Open Git Bash

- Right-click anywhere inside your “2025 Git Projects” folder → select “Show more options” if you don’t see “**Open Git Bash here**”.
- Select “**Open Git Bash here**” => you should see the following:

Step 2: Configure Git (First-Time Only)

Update “User Name” and “User Email”

NOTE: Use “nit.academy” as your FQDN (Fully Qualified Domain Name)

- git config --global user.name "**Your Name**" => example, “patrick.hayden”
- git config --global user.email youremail@example.com => example, patrick.hayden@nit.academy

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

Step 3: Initialize your local repository

- `$git init`

Step 4: Check the status of your LOCAL repository commonly called “Repo”

- `$git status`

Step 5: Let us STAGE our documents/files – basically review before we send them away to github (REMOTE Repository)

- `$git add .` (don't forget the “.”; it means ‘present working directory’)
- `$git status`

Step 6: Removing that which is staged

- `$git rm –cached myfile.txt$git status`
- `$git status`

Step 6: Stage it again

- `$git add .`
- `$git status`

Step 6: Once reviewed let us “save” our work that is ready to be sent to github

- `$commit –m “version 1”` (but we can PUSH from our local machine to github yet!)

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

```
MINGW64:/c/Users/nsidd/OneDrive/Desktop/2025 Git Projects
nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects
$ git config --global user.name "nadeem.siddiqi"

nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects
$ git config --global user.email "nadeem.siddiqi@nit.academy"
> ^C

nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects
$ git config --global user.email "nadeem.siddiqi@nit.academy"

nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects
$ git init
Initialized empty Git repository in c:/Users/nsidd/OneDrive/Desktop/2025 Git Projects/.git/
nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects (master)
$ git add .

nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file: myfile.txt

nsidd@LAPTOP-25A80A7L MINGW64 ~/OneDrive/Desktop/2025 Git Projects (master)
```

8.0 GENERATING SSH KEYS

Follow the STEPS below to generate SSH Keys and

Step 1: on your Git bash we will generate some keys

- ssh-keygen -t rsa -b 4096 -C patrick.hayden@nit.academy

Step 2: Follow the steps below:

- \$ eval "\$(ssh-agent -s)"

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

Step 3:

- \$ ssh-add ~/.ssh/id_rsa

Identity added: /c/Users/nsidd/.ssh/id_rsa (Patrick.hayden@nit.academy)

NOTE: (Replace id_rsa with your actual GitHub private key file if it's different, like id_ed25519.)

Step 4: The command below will "copy" the keys for you

clip < ~/.ssh/id_rsa.pub

Open "Notepad" and paste the key using "Cntrl+v" on your keyboard

Step 5: Let us login www.github.com your account

<https://www.youtube.com/watch?v=X40b9x9BFG0>

- Click on "Settings"
- Click on "SSH and GPG Keys"
- Click on "New SSH Key"

1. Add Title

2. Add Description

3. "Cntrl+v" and paste then

4. Finally "add ssh key"

Final Note:

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

You are now ready to "push" and "pull" code between your local PC and remote GitHub Repository

9.0 BACK TO LOCAL REPO!!!

From your GitHub make sure you select "SSH" and copy the link/url as in the picture below:

Quick setup — if you've done this kind of thing before

[Set up in Desktop] or [HTTPS](#) **SSH** <git@github.com:nitacademy/Projects.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#).

...or create a new repository on the command line

```
echo "# Projects" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin git@github.com:nitacademy/Projects.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin git@github.com:nitacademy/Projects.git
git branch -M main
git push -u origin main
```

Step 1: Check the name of your branch it should be "master"

\$git branch

Step 2 ADD REMOTE REPO (GITHUB)

\$git remote add origin git@github.com:nitacademy/Projects.git

Step 3: Push code from Local PC => Laptop (Remote Repository)

\$git push -u origin master

DOCUMENT TITLE: VERSION CONTROL: GIT, GIT BASH, GIT HUB		INSTITUTE: NEXUS INSTITUTE OF TECHNOLOGY – NIT ACADEMY
DOCUMENT NO: GIT-PRO-NIT-0001	REVISION: R1	

Student Practice Questions

1. What does git init do?
 2. How do you check what files are staged?
 3. What is the difference between git add and git commit?
 4. Why do we use git push?
 5. What is the command to see your current Git settings?
 6. What happens if you run git status before git add?
-

1. Optional Challenges (DO NOT PROCEED)

- Create and commit a second file (e.g., readme.md)
- Make changes to hello.txt and commit again
- Create a new branch using:

\$git checkout -b test-branch
